

Black and White Film Processing

Roll

Roll film in TOTAL DARKNESS.
Place film in tank with lid.

Get the water temperature to 68°F

Develop

See chart for correct time.
Fill the tank with 8oz of developer. DO NOT DILUTE
Agitate continuously for the first 30 seconds.
Tap to remove bubbles.
Then agitate for 5 seconds every 30 seconds until the development time is complete.
Pour the developer down the drain.

Stop Bath

The stop bath for film is water.
Fill the tank with water.
Pour water down the drain.
Repeat steps for 1 minute.

Fix

Use the fix strait from the bucket. DO NOT DILUTE.
Fill the tank with fix (8oz).
Agitate the same as for development. (See Development above)
Fix time is between 5-7 minutes.
If you film is still purple after the 5-7 minutes keep fixing.
Pour used fix back into the bucket. DO NOT POUR THE FIX DOWN THE DRAIN

Wash

Open the tank.
Place the reel in the clear cylinder in the sink.
Let the water fill the cylinder.
Wash the film for 5-10 minutes.

Wetting Agent AKA Photo Flo

Place the reel back in the tank.
Fill the tank with Photo Flo. DO NOT DILUTE.
Let sit for 1 minute. DO NOT AGITATE.
Pour the Photo Flo down the drain.

Place the reel in the drier until dry, about 10 minutes.

Wash and dry tank and lid.
Put back into cabinet.
