

# 4x5 Film Processing

## Tri-X in Edwal FG-7

Prepare water at 70° F. You should have at least 32 ounces worth.

Make sure chemicals are at 70° as well.

All times include a 10-second drain time at the end of the step.

To prepare your developer, dilute 70ml of Edwal FG-7 with 210ml of water.

| Step      | Temperature      | Time    |
|-----------|------------------|---------|
| Pre-wash  | 70° F            | 3 min.  |
| Developer | 70° F            | 6 min.  |
| Wash      | 70° F            | 1 min.  |
| Fixer     | 70° F            | 3 min.  |
| Wash      | 70° F            | 1 min.  |
| Wash      | 70° F            | 1 min.  |
| Wash      | faucet           | 8 min.  |
| Photo-Flo | room temperature | 15 sec. |

Dry — Hang by one corner in the film drying cabinet

**Remember: Processing Times and Temperatures are critical! You must be exact to get good results.**
